page 5, at line 11 to read as follows:

A1 --Figure 2 is a front elevation of the device.--

Please cause the description of the drawings beginning on page 5, at line 12 to read as follows:

A2 -- Figure 3 is a sectioned view taken essentially along 3-3 of Figure 4.--

Please cause the description of the drawings beginning on page 5, at line 13 to

A3 read as follows:

--Figure 4 is a side elevation of the device.--

Please cause the paragraph beginning on page 6, at line 4 to read as follows:

A4 --A control box on top of the unit contains wireless components, the UV-C sensor array 10, a bank of basic stamps, motion detectors 12, and audible and visible alarms. A power switch is provided on the exterior of the device. A series of plugs for control functions are also provided. A power cord is provided.--

Please cause the paragraph beginning on page 6, at line 5 to read as follows:

A5 --A control box on top of the unit contains wireless components, the UV-C sensor array 10, a bank of basic stamps, motion detectors 12, and audible and visible alarms. A power switch is provided on the exterior of the device. A series of plugs for control functions are also provided. A power cord is provided.--

Please cause the paragraph beginning on page 6, at line 6 to read as follows:

A6 --A control box on top of the unit contains wireless components, the UV-C sensor array 10, a bank of basic stamps, motion detectors 12, and audible and visible alarms.

A power switch is provided on the exterior of the device. A series of plugs for control functions are also provided. A power cord is provided.--

Please cause the paragraph beginning on page 6, at line 7 to read as follows:

A7

--A control box on top of the unit contains wireless components, the UV-C sensor array **10**, a bank of basic stamps, motion detectors **12**, and audible and visible alarms. A power switch is provided on the exterior of the device. A series of plugs for control functions are also provided. A power cord is provided.--

Please cause the paragraph beginning on page 6 at line 9 to read as follows:

A7

--Referring now to **Figure 5**, door contacts **24** are shown. These contacts are placed in one or more of the doors of the room in which the device is operating. The door contacts are switches which disable the device if nay one of the switches is opened, such as by opening the door. The motion detectors **12** are immediately activated upon activation of the device and prior to powering of the ballasts **26** and the bulbs, by means of the time delay **28**. If the motion detectors sense motion at any time during the operation of the device, power to the ballasts and the bulbs is immediately disabled. A preferred embodiment has three 120 ° passive ultrasonic motion detectors located on top of the device.

Please cause the paragraph beginning on page 8, at line 8 to read as follows:

A8

--3. The audible voice alarms **14** and the motion detectors activate and stay on until the entire cycle has been complete. Should the UVAS detect motion, the unit automatically deactivates itself until the user re-enters the room and trips a

breaker, thus preventing the user from re-activating the unit and harming a bystander left in the room.--

Please cause the paragraph beginning on page 8, at line 21 to read as follows:

A9 --5. The bulbs are powered, and when sufficient time has elapsed to allow the bulbs to reach a steady state output (one minute or less), the basic stamp reads data from all the individual sensors located on the array. The array senses 360 degrees at a minimum with overlapping of their window of view. They are oriented away from the UVAS, thus measuring the dose of UV-C reflected back to the unit. This data is fed into the microcontroller 16 where it is integrated to compute cumulative exposure of UV-C reflected back from each sensor in the array.--

Respectfully submitted,
